

CEFACLOR

Ceclor

DRUG USES

Here are some of the common uses of Cefaclor:

Respiratory Infections: Cefaclor is often prescribed to treat respiratory tract infections such as bronchitis, pneumonia, and sinusitis caused by susceptible bacteria.

Ear Infections: It can be used to treat middle ear infections (otitis media) caused by certain bacteria.

Skin and Soft Tissue Infections: Cefaclor can also be effective in treating skin and soft tissue infections caused by susceptible organisms.

Urinary Tract Infections (UTIs): Cefaclor may be prescribed for uncomplicated urinary tract infections caused by susceptible bacteria.

Strep Throat: Cefaclor is sometimes used to treat streptococcal throat infections caused by *Streptococcus pyogenes* bacteria.

Community-Acquired Infections: It is used for various community-acquired infections when the causative bacteria are susceptible to cefaclor.

It's important to note that Cefaclor should only be used under the guidance of a medical professional, as inappropriate or unnecessary use of antibiotics can contribute to antibiotic resistance. Also, individual patient factors and the specific bacteria causing the infection will influence the choice of antibiotic.
