

CIPRO

Ciprofloxacin

DRUG USES

Cipro is used to treat a wide range of bacterial infections in various parts of the body. Here are some common uses:

Urinary Tract Infections (UTIs): Cipro is often prescribed to treat uncomplicated and complicated urinary tract infections caused by susceptible bacteria.

Respiratory Tract Infections: It can be used to treat bacterial infections of the respiratory tract, such as pneumonia, bronchitis, and sinusitis.

Skin and Soft Tissue Infections: Cipro can be used to treat skin infections and soft tissue infections caused by susceptible bacteria.

Bone and Joint Infections: It may be used to treat bone and joint infections caused by susceptible bacteria, especially in cases where oral antibiotics are not sufficient.

Gastrointestinal Infections: Cipro can be used to treat certain gastrointestinal infections, including infectious diarrhea caused by certain bacteria.

Intra-abdominal Infections: It might be prescribed to treat intra-abdominal infections caused by susceptible bacteria, including peritonitis.

Infections in Immunocompromised Patients: Cipro can be used to treat infections in patients with compromised immune systems, such as those with HIV/AIDS.

Anthrax Exposure: Cipro can be used as part of post-exposure prophylaxis and treatment for inhalational anthrax.

Traveler's Diarrhea: Cipro may be prescribed to prevent and treat traveler's diarrhea caused by certain bacterial infections.

Prophylaxis in Certain Situations: In some cases, Cipro might be used as a prophylactic treatment to prevent infections in individuals with compromised immune systems, such as before certain surgeries.
